7. Download and test.

- 7a. Download to one phone and make test calls.
- 7b. **Test your programming by dialing 011-999-999-9999. If your programming is correct, you will receive a SIT tone, a message that your call attempt was successful and the coins will be returned when you hang up.**
- 7c. **Test your programming by dialing 011-999-888-8888. This test produces NO SIT tone and the money will not be returned. There is a charge for each test. You will receive an email confirmation of your test calls. If you experience problems, call 1-877-211-9901.**
- 7d. If satisfied with testing, repeat all steps and download all other phones.

Carrier Protocol:

- 1. User dials 011 + country code + city code and deposits coins when prompted.
- 2. The payphone simultaneously dials our toll-free access number and waits for dial tone.
- 3. Upon hearing dial tone, the payphone sends your 5-digit auth code and waits for dial tone.
- 4. Upon hearing the second dial tone, the payphone dials the destination number and opens up the handset for the customer to use with their call and to hear the progress of the call.
- 5. While the call is processing, our switch provides an accurate lack of answer detect until the destination answers. If the destination is busy or does not answer, the payphone user's money is returned.
